## Pensioner Millionaires in the UK

 Identifying the numbers
## Summary

The starting point for the Intergenerational Foundation's work is the UK government's Wealth and Asset Survey that was completed in 2010. This research includes an analysis of total household wealth (including private pension wealth but not the value of state pensions) and identifies the total numbers of households with assets of $£ 1$ million and above by age band.

By calculating the numbers of individuals that these households represent (based on average household size for each age band) it is possible to say how many people aged over 65, and in each of the individual years between 60 and 65 , live in households with a total wealth of more than $£ 1$ million.

In 2011 IF estimates these figures to be as follows for those aged 60+ living in the UK.

|  | Total in 000's UK |
| :--- | :---: |
| Aged 65+ | 988.6 |
| Aged 64+ | $1,124.1$ |
| Aged 63+ | $1,321.4$ |
| Aged 62+ | $1,509.1$ |
| Aged 61+ | $1,684.5$ |
| Aged 60+ | $1,855.3$ |

IF sets out how we have arrived at these estimates in the detailed findings below.
In summary, the Wealth and Assets Survey tells us what proportion of the households in each age band has assets of $£ 1$ million and above. Office of National Statistics data tells us the total number of households. Data from the Communities and Local Government provides the structure of those households by age group. With this data we can work out how many people live in households with assets of $£ 1$ million and over. EU data on the UK population indicates how many people on average live in households in each of the different age bands. From this we can, therefore, estimate the total numbers of people living in households with assets of $£ 1 \mathrm{~m}+$.

## The Detailed Findings

The findings should be read in combination with:

- The attached Appendix.
- Chapter 2 of the Wealth and Assets Survey http://www.ons.gov.uk/ons/dcp171776 271539.pdf from the 2008/2010 wave covers Total Household wealth. This was comprised as follows:

PAGE 2 - Aggregate total wealth (including private pension wealth) of all private households in Great Britain in 2008/10 was $£ 10.3$ trillion, rising from $£ 9.1$ trillion in 2006/08.

Breakdown of aggregate wealth: by components, 2006/08, 2008/10, Great Britain, £ Billion

|  | $\mathbf{2 0 0 6 / 0 8}$ | $\mathbf{2 0 0 8 / 1 0}$ |
| :--- | ---: | ---: |
| Property wealth (net) | 3,532 | 3,447 |
| Financial wealth (net) | 1,031 | 1,085 |
| Physical wealth | 961 | 1,012 |
| Private Pension wealth | 3,626 | 4,786 |
| Total Wealth (including Private pension wealth) | $\mathbf{9 , 1 4 9}$ | $\mathbf{1 0 , 3 3 0}$ |
| Total Wealth (excluding Private pension wealth) | 5,523 | 5,544 |

On page 17 of the Wealth and Assets Survey the household total wealth is shown by age band.
It is from this starting point that all the calculations have been made (Table 1).
Knowing the structure of each of the wealth bands is only useful in relation to the whole population. It is possible to identify the numbers of households that each age band represents in all of the countries that make up Great Britain (the area covered by the Wealth \& Asset Survey).

The total numbers of households appears in Table 2 (having been brought up to 2011 figures as accurately as possible).

These are then calculated into the number of households in each age band in Table 3.
With the structure of the age bands it is now possible to calculate the numbers of households in each age band and wealth band that were given in Table 1 - this is shown in Table 4. The number of households which have assets of more than $£ 1$ million by age band is revealed.

The next question is how many individuals the figures represent and to identify accurately the numbers of those who are retired who fall within the age band 55 to 64 .

Data sources for the average household size per age band are not readily available so The Intergenerational Foundation has created an estimate of them using EU population data which used samples that are representative of the UK population and bringing them up to date. This is shown in Table 5 - the yellow band shows the average household size by age band.

It is then possible to convert the numbers of households by age and wealth band into individuals contained (Table 6).

Finally it is possible to assess the numbers covered by the age band 55 to 64 and break them down into the individual years. Table 7 shows the structure of the GB population by age between 55 and 64 .

Given that there were $1,732,000$ persons aged 55 to 64 living in households with $£ 1$ million + in assets, Table 7 can be used to estimate how they will be apportioned by year (Table 8).

Table 9 adds these together to reveal the cumulative increase in numbers from those aged 65+ to those aged 60+.

The original Wealth Asset Survey figures were for Great Britain only but if Northern Ireland is also included (on the basis of its own population structure BUT assuming the same household wealth structure as GB) then the total in the number of people with assets over $£ 1$ million increases for the whole of the UK as follows:

|  | GB (000s) | NI (000s) | Total-UK (000s) |
| :--- | :---: | :---: | :---: |
| Aged 65+ | 962.0 | 26.6 | 988.6 |
| Aged 64+ | $1,120.1$ | 4.0 | $\mathbf{1 , 1 2 4 . 1}$ |
| Aged 63+ | $1,316.4$ | 5.0 | $\mathbf{1 , 3 2 1 . 4}$ |
| Aged 62+ | $1,504.3$ | 4.8 | $\mathbf{1 , 5 0 9 . 1}$ |
| Aged 61+ | $1,680.0$ | 4.5 | $\mathbf{1 , 6 8 4 . 5}$ |
| Aged 60+ | $1,851.0$ | 4.3 | $\mathbf{1 , 8 5 5 . 3}$ |
